

Web Application Developer: Build software that helps charities change Canada and the world

About you:

You're an innovative, disciplined craftsman who cares **less** about things like the trendiness of a programming language, and **more** about choosing the right tool for the job and using the best design methodologies to build great software.

We need:

- **Your knowledge** of JavaScript and JavaScript frameworks (i.e. jQuery, Backbone.js, etc), JSON, CRUD-based web services, and some sort of server-side language (i.e. C#, Java, etc.)
- **Your experience** of one to two years working on a team producing frequent, public facing product releases and functionality improvements
- **Your skills** to create skeleton mark-up and CSS definitions, enhanced with JQuery code to produce highly usable web interfaces and reusable client side code
- **Your familiarity** with charitable organizations, a bonus

What's in it for you?

- **Interesting projects.** We're building an industry leading service!
- **Work with smart people.** We've come a long way in 12 years!
- **Work with impact.** Our work touches the entire Canadian charitable sector!
- A **stable, creative**, and collaborative environment
- The best tools, and **very competitive compensation**

About us:

CanadaHelps inspires \$75 million in annual giving to over twelve thousand charities, and on behalf of hundreds of thousands of donors. Since 2000, we have been Canada's leader in developing innovative online products to make giving easier and more secure, offering creative giving and donation products for charities across the country.

Think you can make it simpler?

Send us your resume (cover letter too!) to jobs2012@canadahelps.org. If you want to prove you're really paying attention (and have your resume reviewed), include an HTML version of your resume along with a stylesheet, or a link to your favourite Joel on Software article with a paragraph or two on why it's your favourite.
